

Dust-Less Coating Drum *Patent Pending

Spray Dynamics does it again as we introduce a **NEW** style coating drum designed specifically for controlling line-to-line allergens. By combining the industry standard Soft Flight Coating Drum with our newly acquired Side Vented Technology comes the new Dust-Less Drum. These coating drums are comprised of 70% Soft Flight® non-perforated and 30% perforated design. Exhaust air is pulled through the perforated section of the drum, which draws the seasoning through the product bed resulting in greater coating efficiency. The exhaust air is then filtered either through an oil separator or a cartridge type dust collector to control allergens.
